

Internship Opportunity

Web Applications Developer

Job Description

ScriptX Consulting Ltd is a small information management firm that is seeking a Web Applications Developer Intern who can create and design web applications using popular web programming languages and frameworks.

In addition to having the necessary technical skills, you should have a keen interest in keeping updated on the latest technologies and have an eye for designing great interfaces. You'll be responsible for developing both websites (using content management systems) as well as database-driven web applications.

Skills & Requirements

If you're a budding web applications developer, willing to start out as an intern and grow to form ScriptX Consulting Ltd's core web applications development team, below are the job requirements: -

- a) Ability to design and develop web applications that are functional and eye-catching.
- b) Excellent programming and debugging skills in HTML5, CSS, jQuery.
- c) Ability to use PHP frameworks such as Laravel and Codeigniter.
- d) Programming new web applications from specifications.
- e) Experience in deploying websites and web applications to a LAMP stack as well as creating a local LAMP/WAMP stack on your personal computer.
- f) Be able to demo at least two websites / web applications that you have developed and are available either online or on your computer.
- g) Experience using Version Control systems like GIT/SVN and planning basic branching and merging.

If you meet the above-mentioned requirements, please apply to jobs@scriptx.co.ke with a cover letter and your updated curriculum vitae before COB 10th November 2014. Your email subject should be **WEB APPLICATIONS DEVELOPER INTERN**. Expected start date is 1st November 2014.
